

Seeking Volunteers with Juvenile Dermatomyositis (JDM) and Their Siblings and Friends without JDM for The **JDM PLAY** Study

What does the study involve?

The JDM Physical Activity (JDM PLAY) study uses an online questionnaire to learn how JDM affects physical activity in children and adults with JDM.

Who should participate?

Anyone with a diagnosis of JDM who is 5-30 years old and living in the USA or Canada. If you are younger than 18 years old, your parent or guardian will need to fill out the questionnaire for you. We are also interested in having healthy siblings or friends without JDM of the same birth gender and close in age complete the questionnaire as well so we can study differences between the two groups.

We are also interested in having healthy siblings or friends without JDM of the same birth gender and close in age complete the questionnaire as well so we can study differences between the two groups.
